### Flushing cisterns

### Application and use

Flushing cisterns (in combination with WC pans) are intended for use as flushing units connected to drinking water installations with a water temperature of maximum 30 °C.

Flushing cisterns using a nominal flush volume of 6 litres are intended for use in connection with WC-pans of the type 6A, according to Kiwa evaluation guideline BRL-K619.

### Marking

The products are marked with the wordmark "KIWA".

Place of the mark:

- on the cistern: at the inside above the waterline;
- on the float valve: on the body.

### Compulsory specifications:

- · name or mark of manufacturer;
  - on the cisterns on the left side, right side, the front or on the inside above water level
  - on the float operated valve: on the body
- reference to the European Standard EN14055.

### Method of marking:

- · non-erasable;
- · visible after assembly.

### RECOMMENDATIONS FOR CUSTOMERS

Check at the time of delivery whether:

the supplier has delivered in accordance with the agreement;

the mark and the marking method are correct;

the products show no visible defects as a result of transport etc.

If you should reject a product on the basis of the above, please contact:

Viega GmbH & Co. KG

and, if necessary,

Kiwa Nederland B.V.

Consult the supplier's processing guidelines for the proper storage and transport methods.
